## Commissioner Vytenis Andriukaitis WBDD 2018

- Blood transfusions are a vital medical intervention
- To encourage blood transfusions and avoid related complications, including the transmission of diseases from donor to recipient the EU has laid out **directives** that set out safety standards for blood collection. EC is currently carrying out the first formal **evaluation** of this legislation since its adoption in 2002.
- The European Commission also actively supports EU countries, through the **Public Health Programme**, to continuously improve blood donation and blood supply programmes, appropriate clinical use of this precious resource and effective oversight procedures for ensuring safety and quality.
